

# epasit®

Systems provide protection

## → The quick cement

CAPABLE OF BEARING WITHIN 3 MINUTES

Amateur mechanics, craftsmen and building contractors take *epasit sp* - the quick cement. It has everything they need. Applicable almost everywhere - easy to process - capable of bearing within a few minutes - not sensitive to frost - breathable - does not endanger iron - ideal for a quick and secure fastening / anchorage in floors, walls, and ceilings.

the quick cement for all urgent construction works, because it is capable of bearing within about 3 minutes. epasit sp is a mineral-bound quick cement mixed and ready for use - a product from nature.

Especially in winter months, epasit sp can be used for concreting and laying bricks.

epasit sp is excellently suitable for cementing and anchoring of:

- > Grilles and protective gratings
- > Heating units
- > Roller shutters
- > Garage doors
- > Doors and gates
- > Outdoor lights
- > Lighting installations
- > Fences

- > Conductions
- > Letterboxes
- > Outdoor communications
- > Flower boxes
- > Facades of natural stone
- > Piers and walls
- > Scrapers
- > Corner irons
- > Indoor and outdoor sewerage systems
- > Tank farms, placing and Sealing of manhole domes
- > Fireplace coverings
- > Machines
- > Motors
- > WC and bidet sustainers
- > for hobby and model making and so on

...and thus epasit sp is applied:

as a quick cement:

Mix 1kg of epasit sp with about 0.3 litre of water to a plastic compound and process it within one minute. Setting time about three minutes.

as a masonry mortar or grout

epasit sp can easily be mixed with fire-dried silica sand or clean, edulcorated river sand to masonry mortar or grout (with a suitable addition it can also be used for concreting)

Mix 2 volume parts of epasit sp and 1 volume part of dry silica sand with a 3/4 volume part of water within one minute to a plastic compound and process it immediately.

epasit sp is available in buckets of 1kg, 5kg, 15kg and sacks of 30 kg.
