

Products for gardening and landscaping.

epasit[®]

Feel good like in your holiday - with epasit

Dreams come true - with epasit

Do you also have this dream of a lovely garden landscape, in which you can relax? Let your dream come true with epasit! We have the right ideas and solutions for you - and more than 50 years of experience.

Laying and grouting pavings, constructing and plastering small walls, sealing ponds and wells, repairing and touching up natural stones - all this and a lot more you can realize in a simple and safe way with the products from epasit.

Visit our website www.epasit.de or simply call us under +40(0)70 32/2 01 50. We will give you advice by phone or, if desired, you can fix a date on the job with our technical consultants.

Concrete as a material used in gardens

Concrete is a material which is out of place in gardens. Really? Security is important everywhere! In a garden also rails, gate frames and fence posts have to be anchored in a safe way. Benches, playground equipment and summer-houses need a foundation capable of bearing. For these and similar assembly

and concrete works, the dry concrete 'epasit be' offers the perfect solution.

To construct small walls and to plaster them in an attractive way, if desired, is a task for the epasit masonry mortars and grouts. With the universal repair mortar 'epasit u' or with the quick cement

'epasit sp', concrete elements can be repaired in a simple and attractive manner.

By the way: epasit offers you a complete concrete repair system and, in addition to this, protective coatings, water-repellent waterproofings and even a protection against graffiti!

Restful waterways

Water makes a garden really animated: an ornamental pond, a fishpond or a swimming pool, however, are not only very attractive - they are also a source of rest! To take pleasure in it for a long time, the water must not seep away. Mineral, ecofriendly mortars seal safely and are even partly permitted for potable water.

This means that water quality remains perfect when using these mortars.

Cisterns can be sealed the same way to procure rain water as water for the plants.

Garden paths for happiness

Paved paths are not only a versatile method used for garden architecture, but they will also guarantee safe and clean ways through the garden.

The paving will be laid and grouted professionally by using the corresponding epasit mortars. Here the paving mortar 'epasit ps' with its various tints and grain sizes is an excellent choice. It is ethetical pleasing and also particularly capable of bearing. Additionally, it is extremely easy-care, because it will always be free of weed and vermin.

Certainly, we can also offer you sand and gravel.

The beauties of stones

Of course, the ravages of time corrodes natural stones. It is, however, possible to repair them or to touch them up. Then they will look like they have been before. epasit offers you a big choice of tints for almost all natural stones. The six standard tints of the sandstone substitution mortar 'epasit ssm' and of the stone slurry 'epasit st' can be mixed with each other without problems. On request you can have a model of almost all tints.

Good to know: also window sills, mouldings, pilaster strips, profiles, stairs, socles, facades, figures and others of sandstone, limestone, sand-lime brick, artificial stone or concrete can be repaired or imitated.

A piece of paradise

Realize your dream garden and enjoy the green oasis designed according to your request: close to nature or extravagant, recently laid out or redesigned. Conquer with epasit step by step your small piece of paradise!

With epasit you have almost boundless possibilities to design your garden in an attractive and safe way. You will benefit from it in a unique way! Your garden will offer you relaxation and rest for your body, your mind and your soul.

Whenever you need us: we are here for you.

The products from epasit have proved their suitability in practice. However, when building you find different conditions for working and rehabilitation. Therefore, we recommend to try, first of all, the intended materials in order to get a grip on the working techniques, the material and the consumption rates.
